

CRITICAL THINKING SKILLS

www.idm.ac

About the Programme

The ability to think critically and analytically enables us to make well-thought-through and informed decisions. This course covers a range of topics and methods aimed at developing skills relative to logical reasoning, evaluation of arguments and problem-solving.

Attendees will be required to analyze case studies, complete puzzles and conduct research which will provide them with a solid foundation for distinguishing relevant from non-relevant data and fact from opinion.

Course Topics Basic

- Overview of critical thinking
- Logical reasoning
- Argument analysis
- Problem-solving techniques
- Decision-making (discussion of decision-making models)
- Critical Thinking in context
- Collaborative and critical thinking in a team
